

CHINEDU KINGSLEY

Full Stack Developer | Backend Engineer

Lagos, Nigeria | +234 8021403153 | Kchinedu973@gmail.com | portfolio-c3o2.vercel.app | [GitHub](#)

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with 3+ years of project-based experience designing, building, and deploying scalable web applications. Proficient in React.js, Node.js, Express.js, MySQL, Sequelize, and OpenAI API integration, with a strong track record delivering end-to-end solutions — from AI-powered healthcare assistants to self-hosted media servers. Experienced in JWT authentication, bcryptjs security, n8n workflow automation, Linux server administration, Nginx reverse proxy, PM2 process management, and GitHub Actions CI/CD pipelines. Adept at clean MVC architecture, RESTful API design, and production-grade deployment. Passionate about contributing to fintech, health tech, and enterprise technology teams.

TECHNICAL SKILLS

Frontend	React.js, Vite, HTML5, CSS3, JavaScript (ES6+), Tailwind CSS, Responsive UI Design, Fetch API
Backend	Node.js, Express.js, RESTful APIs, MVC Architecture, Multer, Morgan, Axios
Database	MySQL, Sequelize ORM, Schema Design, CRUD Operations, Database Modeling
DevOps & CI/CD	Linux (Ubuntu), Nginx (Reverse Proxy), PM2, GitHub Actions, Shell Scripting, Local Server Hosting
Networking	LAN Configuration, Static IP Assignment, DHCP Reservation, Reverse Proxy, Media Streaming
Version Control	Git, GitHub
Tools	VS Code, Postman, NPM, Vite, dotenv
AI & Automation	OpenAI API, Context-Aware AI Integration, n8n Workflow Automation, Bot Logic
Auth & Security	JWT (JSON Web Tokens), bcryptjs, Middleware Auth Guards, Nodemailer, dotenv
Other	API Caching, File Management Systems, CORS, UUID, Database Seeders, MVC Architecture

EXPERIENCE

Full Stack Developer — Independent Projects

Lagos, Nigeria | 2023 – Present

- Designed, built, and deployed 5+ production-grade web applications spanning full stack development, Linux server administration, and DevOps automation.
- Architected RESTful APIs handling authentication, file upload/management, media streaming, and intelligent bot recommendation features.
- Configured Ubuntu Linux servers with Nginx reverse proxy, PM2 process persistence, and automated restart on failure.
- Established GitHub Actions CI/CD pipeline: code push triggers automated build, SSH deployment, and PM2 restart on self-hosted Ubuntu server.
- Administered MySQL databases including schema design, Sequelize ORM migrations, and multi-table CRUD operations.

- Collaborated with developer communities online to resolve complex technical challenges and adopt best practices.

PROJECTS

AI-Driven Context-Aware Personal Assistant — Healthcare System [Final Year Project]

2024 – 2025

GitHub: github.com/Chineduk26/FullStack-project_Stack

- Designed and built a full-stack AI-powered personal assistant tailored for healthcare environments, enabling context-aware patient and staff interactions using the OpenAI API — submitted as B.Sc. Computer Science final year project at Babcock University.
- Implemented secure user authentication and authorization using bcryptjs for password hashing and JSON Web Tokens (JWT) for stateless session management, protecting all sensitive health-related API routes via custom Express middleware.
- Integrated OpenAI API to power intelligent, context-aware conversations — the assistant retains session context to deliver relevant, personalized responses for healthcare use cases such as symptom queries, appointment guidance, and health FAQs.
- Architected a layered MVC backend (controllers, models, routes, services, utils) using Express.js v5 and Sequelize ORM with MySQL, with database seeders for initial data population and a dedicated services layer for business logic separation.
- Implemented automated email notifications via Nodemailer for appointment reminders, alerts, and system communications — reducing manual follow-up overhead in healthcare workflows.
- Integrated n8n workflow automation to orchestrate multi-step background processes including scheduled health reminders, data pipeline triggers, and automated patient communication flows without manual intervention.
- Built a responsive React frontend consuming all backend APIs, providing a clean and accessible interface for both healthcare professionals and patients.

Tech Stack: *React.js, CSS3, Node.js, Express.js v5, MySQL, Sequelize ORM, OpenAI API, JWT, bcryptjs, Nodemailer, n8n Workflow Automation, Axios, dotenv*

Hybrid Media File Server — Full Stack + DevOps + Networking

2025

GitHub: github.com/Chineduk26/hybrid-file-server

- Built a self-hosted fullstack media server on Ubuntu Linux — accessible across LAN without internet dependency, serving as a local cloud storage and streaming platform.
- Engineered a Node.js/Express backend with Multer for file uploads, supporting automatic MIME-type categorization (images, videos, PDFs, documents, spreadsheets) stored in MySQL via Sequelize.
- Developed a React + Tailwind CSS + Vite frontend with 5 pages: Home, Files, Movie Streaming, Gallery, and a URL Downloader feature that fetches remote files and saves metadata to the database.
- Configured Nginx as production reverse proxy routing traffic to the React frontend and Express API, with PM2 ensuring 24/7 backend uptime and auto-restart.
- Set up GitHub Actions CI/CD pipeline for automated deployments: git push triggers build, SSH to Ubuntu server, and PM2 restart — reducing manual deployment time to zero.
- Planned and implemented static IP assignment with router DHCP reservation for reliable LAN access via `http://SERVER_IP`.

Tech Stack: *React.js, Vite, Tailwind CSS, Node.js, Express, MySQL, Sequelize, Nginx, PM2, GitHub Actions, Ubuntu Linux, Multer, Axios*

Product Management System — Full Stack CRUD Application

2024

- Developed a complete full-stack CRUD application for product lifecycle management: create, read, update, and delete operations with a clean, modular MVC architecture.
- Engineered an intelligent Bot Suggestion feature via a dedicated `/bot/suggest` API route that dynamically recommends products based on backend data — designed as a scalable foundation for future AI integration.
- Built a responsive JavaScript frontend using Fetch API for seamless asynchronous client-server communication with no framework dependency.

Tech Stack: *Node.js, Express.js, Sequelize, MySQL, HTML5, CSS3, JavaScript (ES6+), Fetch API*

Weather Dashboard — Third-Party API Integration

2024

- Integrated a third-party Weather API to fetch and render real-time weather data dynamically, demonstrating proficiency in external API consumption and JSON data handling.
- Implemented clean, responsive UI with live data rendering using vanilla JavaScript and CSS.

Tech Stack: HTML5, CSS3, JavaScript, Fetch API, REST API Integration

EDUCATION

B.Sc. Computer Science — Babcock University

Expected July 2026

Relevant Coursework: Algorithms & Data Structures, System Design, Database Management, Software Engineering, Computer Networks

Full Stack Development Bootcamp

2023

Core: Node.js, Python, HTML, CSS, Bootstrap, EJS, MongoDB, Express — MERN/MEAN Stack

KEY HIGHLIGHTS

-
- Built an AI-driven context-aware healthcare personal assistant as B.Sc. final year project — integrating OpenAI API, JWT auth, n8n automation, and Nodemailer on a production-grade Express v5 + MySQL backend.
 - Sole developer on all projects — handled architecture, backend, frontend, DevOps, and networking end-to-end.
 - Actively building toward B.Sc. Computer Science graduation (Babcock University, July 2026) with 3 years of concurrent real-world project experience.
 - Strong alignment with fintech and health tech sectors through expertise in secure RESTful APIs, data modeling, and scalable backend architecture.
